

Job Title: Quality Technician, Quality (Glasgow, UK)

Collagen Solutions is a global leader in collagen-based biomaterials supply and development for use in regenerative medicine and medical devices. We are an exciting fast-paced growth company publicly traded on the London Stock Exchange, and looking for high calibre team members passionate about our vision:

To be the industry's first choice for regenerative biomaterials

The Quality Technician works within the Scotland, UK based Quality function with the main focus of the role will be around laboratory activities relating to the validation and conduct of QC in process and release assays. Additionally they will assist in the ongoing maintenance and effectiveness of quality management system processes. This position is a key role within the Quality organization ensuring innovative and quality products are delivered in a timely manner while maintaining compliance with industry standards and regulations.

Essential Functions:

- This position reports to the Quality Manager
- Contribute to implementation and compliance with company's ISO 13485 Quality System
- Execute/oversee analytical methods (final product/incoming raw material testing) in line with ISO 13485/GMP regulations and requirements, including Verification and Validation of QC release assays
- Schedule analyses in line with manufacturing schedules
- Inspection (including testing) and handling of incoming goods
- Compliance with laboratory safety (Such as COSSH, Health and Safety, Calibration, Raw material maintenance)
- Non Conformances, Deviation, CAPA and Root Cause Investigation
- Develop laboratory protocols for lab equipment
- General laboratory housekeeping and GMP activities
- Carry out process control procedures, e.g. environmental monitoring
- Contribute to the ongoing quality system improvements
- Work with other functions to resolve quality/process issues and ensure adequate control of materials and processes
- Assist in the conduct of Internal and Supplier Audits
- Assist in external audits (Notified Body audits and Health Authority inspections)
- Environmental Monitoring of Clean Rooms
- Document control
- Writing and implementing procedures
- Assist in risk management processes
- Supplier Evaluation/Qualification
- Tracking calibration and maintenance requirements
- Other duties as reasonably assigned by Senior Management

Requirements:

- Minimum bachelor's degree or equivalent in Material Science, Bioengineering, Chemistry, or related technical discipline.
- Lab experience essential
- MSc and industry experience (ISO 13485/GMP/GLP) desirable
- Working knowledge of laboratory safety precautions and protocols for safe handling and the disposal of hazardous agents, re-agents, chemicals and materials.
- Understanding of medical device industry desirable. Working knowledge of other related disciplines.

- Exceptional organizational, communication (verbal and written) and interpersonal skills.
- Work under minimal supervision
- Attention to detail, effective problem solving and decision-making skills.
- Knowledge of Outlook, MS Excel, MS Word, MS PowerPoint
